Matthew,

Thanks for your feedback. I am sharing your comments with colleagues and AFGE President who helped me with decisions last week so we can do better next time.

Hi Ed,

Thank you for keeping us informed on this issue. I think it would be helpful if Region 10 management could be much more transparent about this concerning issue as it evolves. In particular, it would be good to know the information and decision making criteria for lifting the drinking water ban for the entire building. It would also be helpful for you to provide more updates on what sampling is underway. Your email below excludes many of the floors that EPA sits on, so it's very unclear as to what our status has been and what the next steps are.

In addition, I'm confused as to why the building was open for employees on Friday. With the drinking water ban and no alternate source provided, it seems to me that having the office open is a violation of L&I rules (<http://www.lni.wa.gov/wisha/rules/corerules/PDFs/296-800-230.pdf>). As far as I'm aware no alternate source was provided during the ban, although you mentioned it was "being looked into." Given a large majority of the employees are able to flexiplace, I think this should have been encouraged, if not required.

I appreciate you saying that the Region is taking this issue seriously and I'm sure there is a lot going on behind the scenes that employees are not aware of, but with the limited information being shared and the lack of a response beyond posting signs at drinking water fountains Friday, it's hard to see that. Unfortunately, I just filled out my EVS survey this year before this issue arose, so I cannot reflect my concerns in that forum.

Thanks,

Matthew Szelag | Water Quality Standards Coordinator

Subject: Lifting the warning about tap water in Park Place

Importance: High

We spent today with GSA and the Park Place building management to review their drinking water sampling plan/protocol and sampling results from floors 16, 17, 20, and 21. Based on our review today, I am pleased to report that we identified only one location that exceeds the action level for lead, the 16th floor employee lounge. To eliminate exposure at that location, the building management closed off the water supply to the affected refrigerator and sink until we can determine the source of the problem. We have asked for further testing of 16th floor drinking water sources and the building management agreed to conduct the testing next Tuesday. We have asked for further testing on the 1st floor in advance of our occupancy. The building management is also conducting additional tests in the fitness center.

Test results show no elevated lead level above the action level on floors 17, 20, and 21. GSA drinking water tests conducted over the last three years at the Green Tree day care centers also show no elevated lead level above the action level. Although we do not have any information about our other floors in Park Place, based on the results from floors 17, 20, and 21 and the Green Tree day care center, we do not expect tap water in the building to exceed the action level.

Nevertheless, we continue to take this matter very seriously so we plan to conduct our own testing in our space in the coming weeks. We will share all results with you.

If you have any questions, please contact Mary Kay Voytilla or Mark Filippini.
